Content-Type Header

Supported Content-Types

- `application/json`
- `application/ld+json`

Default is `application/json`, in which case the `@context` must be supplied in a `Link` header see: https://developer.mozilla.org/en-US/docs/Web/HTTP/Headers/Link

`Link` Header is to be preferred as it reduces the size of the payloads

Follow JSON-LD best practices.
see https://w3c.github.io/json-ld-bp

```
{
   "id": "http://dbpedia.org/resource/John_Lennon",
   "type": "Person",
   "name": {"type": "Property", "value": "John Lennon"},
   "born": {"type": "Property", "value": "1940-10-09"},
   "spouse": {"
      "type": "Relationship",
      "object": "http://dbpedia.org/resource/Cynthia_Lennon"
    }
}
```

```
{
   "@context":  [
       "https://fiware.github.io/data-models/context.jsonld",
       "https://uri.etsi.org/ngsi-ld/v1/ngsi-ld-core-context.jsonld"
    ],
   "id": "http://dbpedia.org/resource/John_Lennon",
   "type": "Person",
   "name": {"type": "Property", "value": "John Lennon"},
   "born": {"type": "Property", "value": "1940-10-09"},
   "spouse": {"
      type": "Relationship",
     "object": "http://dbpedia.org/resource/Cynthia_Lennon"
    }
}
```

```
'Link: <http://.../path-to-my-public-server/ngsi-context.jsonld>;
rel="http://www.w3.org/ns/json-ld#context"; type="application/ld+json"'
```

FIWARE

Accept Header for GET /entities and Subscription payloads

Supported Accept Types

- `application/json` - `@context` is returned in a `Link` header
- `application/ld+json` - `@context` is returned in the payload body
- `application/geo+json` - GeoJSON response for GET /entities and subscriptions
  see https://tools.ietf.org/html/rfc7946

The fallback for error messages is `application/json`

Common NGSI-LD Formats

- `options=normalized`
- `options=concise`
- `options=keyValues`

Custom Formats **may** be supported by selected context brokers:

- `options=x-ngsiv2-normalized`
- `options=x-ngsiv2-keyValues`
- `options=x-ngsiv2-keyValues-compacted`

Custom NGSI-LD Formats should be used connection to microservices only
Do not use them for data exchange

GeoJSON request example

Give me all **Animal** entities which are **pigs inCalf** to be found within 2km of 13.364°N 52.52°E
… and return the data as key-value pairs in GeoJSON format without an `@context` attribute

```
curl -G 'http://localhost:1026/ngsi-ld/v1/entities/' \
  -d 'georel=near;maxDistance==2000' \
  -d 'geometry=Point' \
  -d 'coordinates=%5B13.364,52.52%5D' \
  -d 'q=species==%22pig%22;reproductiveCondition==%22inCalf%22' \
  -d 'type=Animal' \
  -d 'options=keyValues' \
  -H 'NGSILD-Tenant: openiot' \
  -H 'Accept: application/geo+json' \
  -H 'Prefer: body=json'  \
  -H 'Link: <http://.../path-to-my-public-server/ngsi-context.jsonld>;
rel="http://www.w3.org/ns/json-ld#context"; type="application/ld+json'
```

Use `Prefer=ld+json` to return in GeoJSON-LD format
see https://geojson.org/geojson-ld/

GeoJSON response example

```
{
    "type": "FeatureCollection",
    "features": [
        {
            "id": "urn:ngsi-ld:Animal:pig016",
            "type": "Feature",
            "properties": {
                "type": "Animal",
                "heartRate": 62,
                "phenologicalCondition": "femaleAdult",
                "reproductiveCondition": "inCalf",
                "name": "Tango",
                "legalID": "F-sow016-Tango",
                "sex": "female",
                "species": "pig",
                "location": {
                   "type": "Point",
                   "coordinates": [13.355, 52.523]
                }
            },
            "geometry": {
                "type": "Point",
                "coordinates": [ 13.355, 52.523]
            }
        },
...etc
    ]
}
```

- Since entities typically have a `location` they can be plotted onto a map.
- GeoJSON is used as an output format only.
- Any GeoJSON `Feature` and/or `FeatureCollection` can be easily digested by any GIS system.

FIWARE

Normalized vs Concise Payload

Concise **Property** Format

Normalized Property

```
{
    "temperature": {
        "type" : "Property",
        "value" : 100,
    }
}
```

Concise Property

```
{
    "temperature": {
        "value" : 100,
    }
}
```

Super Concise Property

```
{
    "temperature": 100
}
```

- `type` is optional
- `value` is optional (if no sub-attributes present)

The concise format is shorter than normalized but unlike key-values it is still lossless.

Concise **GeoProperty** format

Normalized GeoProperty

```
{
    "location": {
        "type" : "GeoProperty",
        "value" : {
          "type": "Point",
          "coordinates": [-73.97, 40.77]
        }
    }
}
```

Concise GeoProperty

```
{
    "location": {
        "value" : {
          "type": "Point",
          "coordinates": [-73.97, 40.77]
        }
    }
}
```

Super Concise GeoProperty

```
{
    "location": {
        "type": "Point",
        "coordinates": [-73.97, 40.77]
    }
}
```

- `type` is optional
- `value` is optional (if no sub-attributes present)
- **GeoProperty** is inferred if the `type` is a supported GeoJSON type.

FIWARE

Concise **Relationship** format

Normalized Relationship

```
{
    "providedBy": {
        "type" : "Relationship",
        "object" : "urn:ngsi-ld:Entity:001"
    }
}
```

Concise Relationship

```
{
    "providedBy": {
        "object" : "urn:ngsi-ld:Entity:001"
    }
}
```

- **`type`** is optional
- **`object`** is mandatory

FIWARE

Concise **LanguageProperty** format

Input and Output format. Potentially NGSI-LD 1.6.1

Normalized LanguageProperty

```
{
  "name": {
      "type": "LanguageProperty",
      "languageMap": {
          "el": "Κωνσταντινούπολις",
          "en": "Constantinople",
          "tr": "İstanbul"
      }
  }
}
```

- `type` is optional
- `languageMap` is mandatory

Concise LanguageProperty (as Map)

```
{
  "name": {
      "languageMap": {
          "el": "Κωνσταντινούπολις",
          "en": "Constantinople",
          "tr": "İstanbul"
      }
  }
}
```

Concise LanguageProperty (as Property)

```
{
  "name": {
    "value": "Constantinople",
    "lang": "en"
  }
}
```

FIWARE

Concise Format allowed for all `/entities` endpoints

- **GET** `/ngsi-ld/v1/entities/?options=concise`
- **POST** `/ngsi-ld/v1/entities/`
- **GET** `/ngsi-ld/v1/entities/<entity-id>?options=concise`
- **POST** **PATCH** `/ngsi-ld/v1/entities/<entity-id>/attrs`
- **PATCH** `/ngsi-ld/v1/entities/<entity-id>/attrs/<attr-id>`
- Plus all relevant Batch Operation endpoints:
  POST `/ngsi-ld/v1/entityOperations/xxx`

FIWARE

Temporal Interface

NGSI-LD Temporal interface

Give me the last 5 readings about a single entity and return in default (normalized) format:

```
curl -G -X GET 'http://localhost:8080/temporal/entities/urn:ngsi-ld:Animal:cow001' \
  -d 'lastN=5' \
  -H 'NGSILD-Tenant: openiot' \
  -H 'Link: <http://.../path-to-my-public-server/ngsi-context.jsonld>;
rel="http://www.w3.org/ns/json-ld#context"; type="application/ld+json"'
```

- Temporal endpoints are found under `/temporal/entities`
- Temporal endpoints are **optional** - not directly supported by all context brokers
- Gives a context broker a “memory” at the cost of data storage and maintenance.
- Expect a performance hit - don’t run as `DEBUG`

Sample docker-compose:
https://github.com/FIWARE/tutorials.Short-Term-History/blob/NGSI-LD/docker-compose/orion-ld.yml

Normalized Temporal request

- 1.4 kB Unlimited Temporal Responses get very long very quickly

```
{
  "id": "urn:ngsi-ld:Animal:cow001",
  "type": "Animal",
  "legalID": [
    {
      "type": "Property",
      "value": "M-bull001-Beany",
      "instanceId": "urn:ngsi-ld:attribute:instance:ec12e7fc-a45d-11eb-a739-0242ac120106"
    },
    … etc
  ],
  "name": [
    {
      "type": "Property",
      "value": "Beany",
      "instanceId": "urn:ngsi-ld:attribute:instance:ec1284c4-a45d-11eb-a739-0242ac120106"
    },
    … etc
  ],
  "sex": [
    {
      "type": "Property",
      "value": "male",
      "instanceId": "urn:ngsi-ld:attribute:instance:ec12aad0-a45d-11eb-a739-0242ac120106"
    },
    … etc
  ],

...etc
  ],
```

The following are mandated by the core **`@context`**

- `value`
- `unitCode`
- `observedAt`

```
  "location": [
    {
      "type": "GeoProperty",
      "value": {
        "type": "Point",
        "coordinates": [13.409,52.471,0]
      },
      "observedAt": "2021-04-26T09:35:16.814Z",
      "instanceId": "urn:ngsi-ld:attribute:...",
      "providedBy": {
        "object": "urn:ngsi-ld:Device:cowcollar001",
        "type": "Relationship",
        "instanceId": "urn:ngsi-ld:attribute:..."
      }
    },
    … etc
  ],

    "heartRate": [
    {
      "type": "Property",
      "value": 52,
      "observedAt": "2021-04-26T09:35:16.814Z",
      "instanceId": "urn:ngsi-ld:attribute:..",
      "unitCode": "5K",
      "providedBy": {
        "object": "urn:ngsi-ld:Device:cowcollar001",
        "type": "Relationship",
        "instanceId": "urn:ngsi-ld:attribute:..."
      }
    },
 ...etc
  ]
}
```

FIWARE

Temporal Queries on attributes without `observedAt`

Give me the last 5 readings about all **female Animals**, and return them 2 at a time

```
curl -G -X GET 'http://localhost:8080/temporal/entities' \
  -d 'type=Animal' \
  -d 'pageSize=2' \
  -d 'lastN=5' \
  -d 'q=sex==%22female%22' \
  -d 'timeproperty=modifiedAt' \
  -d 'options=count' \
  -H 'NGSILD-Tenant: openiot' \
  -H 'Link: <http://.../path-to-my-public-server/ngsi-context.jsonld>;
rel="http://www.w3.org/ns/json-ld#context"; type="application/ld+json"
```

- Default temporal attribute is `observedAt`.
- static attributes are usually not observed - cannot be queried in the `q` parameter directly
- Use `timeproperty=modifiedAt` to query static properties

Temporal Response including `modifiedAt`

```
{        "id": "urn:ngsi-ld:Animal:cow003",
        "type": "Animal",
        "heartRate": [
            {
                "type": "Property",
                "value": 51.0,
                "observedAt": "2021-04-26T09:36:36.577Z",
                "modifiedAt": "2021-04-26T09:38:09.579Z",
                "instanceId": "urn:ngsi-ld:attribute:instance:627f4202-a673-11eb-89a1-0242ac120106",
                "unitCode": "5K",
                "providedBy": {
                    "object": "urn:ngsi-ld:Device:cowcollar003",
                    "type": "Relationship",
                    "modifiedAt": "2021-04-26T09:38:09.579Z",
                    "instanceId": "urn:ngsi-ld:attribute:instance:62816672-a673-11eb-89a1-0242ac120106"
                }
            }
 … etc
```

- `modifiedAt` is returned in the response.
- There may be a significant lag between `observedAt` and `modifiedAt`
- `modifiedAt` identifies the last confirmed value, not necessarily the last change of value

Pagination options

Query Parameters

- `lastN` - limits the number of returned Attributes
- `pageSize` - limits the number of returned Entities
- `pageAnchor` - id of the first returned Entity
- `options=count` - includes the number of entities as a header in the response

Relevant Headers in response

- `Content-Range` - `date-time 2021-04-26T09:41:15.752-2021-04-26T09:29:10.834/5`
- `NGSILD-Results-Count` - 174
- `Page-Size` - 2
- `Next-Page` - `urn:ngsi-ld:Animal:cow004`

```
curl -G -X GET
'http://localhost:8080/temporal/entities' \
  -d 'type=Animal' \
  -d 'pageSize=2' \
  -d 'lastN=5' \
  -d 'q=sex==%22female%22' \
  -d 'timeproperty=modifiedAt' \
  -d 'options=count' \
  -d pageAnchor=urn:ngsi-ld:Animal:cow004 \
...etc
```

Time limiting and Geofencing Temporal Queries

Give me the `heartRate`, `location` and `controlledAsset` attributes of all **Device** entities, found within 800m of 13.364°N 52.52°E and return all readings taken since 8:30 a.m on 22nd April, returning them 2 devices at a time and in temporal values format

```
curl -L -g -X GET 'http://localhost:8080/temporal/entities' \
  -d 'type=Device' \
  -d 'attrs=location,controlledAsset' \
  -d 'options=temporalValues' \
  -d 'georel=near%3BmaxDistance==800' \
  -d 'geometry=Point' \
  -d 'coordinates=[13.364,52.52]' \
  -d 'timerel=after' \
  -d 'timeAt=2021-04-22T08:33:51.255Z' \
  -d 'pageSize=2' \
  -H 'NGSILD-Tenant: openiot' \
  -H 'Link: <http://.../path-to-my-public-server/ngsi-context.jsonld>;
rel="http://www.w3.org/ns/json-ld#context"; type="application/ld+json"' \
  -H 'Accept: application/json'
```

Temporal Values Response

```
[
    {
        "id": "urn:ngsi-ld:Device:pigcollar001",
        "type": "Device",
        "heartRate": {
            "type": "Property",
            "values": [
                [ 61.0, "2021-04-26T08:55:56.100Z"]
                ...etc
            ]
        },
        "location": {
            "type": "GeoProperty",
            "values": [
                [{"type": "Point", "coordinates": [13.355, 52.516, 0.0]},"2021-04-26T08:55:56.100Z"],
                ...etc
            ]
        },
        "controlledAsset": {
            "type": "Relationship",
            "objects": [
                ["urn:ngsi-ld:Animal:pig001", "2021-04-26T08:55:56.100Z"],
                ... etc
            ]
        }
    },
    … etc
]
```

- The response holds an array of attribute value-time stamp pairs for each observed reading.
- Properties are held in `values` arrays, Relationships use `objects`

RE

Updating Entities

Partial Update vs Merge Patch

Partial Update of an Entity

PATCH `/ngsi-ld/v1/entities/<entity-id>/attrs`

Original Entity

```
{
    "id": "urn:ngsi-ld:Sensor:001",
    "type": "TemperatureSensor",
    "temperature": {
        "type" : "Property",
        "value" : 25,
        "unitCode": "CEL"
        "observedAt": "2022-01-01"
    }
}
```

Normalized Payload:

```
{
    "temperature": {
        "type" : "Property",
        "value" : 100,
        "observedAt": "2022-03-14"
    }
}
```

Result: Updated Entity

```
{
    "id": "urn:ngsi-ld:Sensor:001",
    "type": "TemperatureSensor",
    "temperature": {
        "type" : "Property",
        "value" : 100,
        "observedAt": "2022-03-14"
    }
}
```

- `value` updated to 100
- `observedAt` updated
- `unitCode` **removed**
- Other Attributes unchanged

`temperature` attribute **replaced** with payload contents

FIWARE

Partial Update of an Attribute

PATCH `/ngsi-ld/v1/entities/<entity-id>/attrs/temperature`

Original Entity

```
{
    "id": "urn:ngsi-ld:Sensor:001",
    "type": "TemperatureSensor",
    "temperature": {
        "type" : "Property",
        "value" : 25,
        "unitCode": "CEL",
        "observedAt": "2022-01-01"
    }
}
```

Normalized Payload:

```
{
    "type" : "Property",
    "value" : 100,
    "observedAt": "2022-03-14"
}
```

- `value` updated to 100
- `observedAt` updated
- `unitCode` **not** removed
- Other Attributes unchanged

Result: Updated Entity

```
{
    "id": "urn:ngsi-ld:Sensor:001",
    "type": "TemperatureSensor",
    "temperature": {
        "type" : "Property",
        "value" : 100,
        "unitCode": "CEL"
        "observedAt": "2022-03-14"
    }
}
```

`temperature` sub-attribute **replaced** with payload contents

FIWARE

Merge of an Entity (1) - **Normalized** Payload Support

PATCH `/ngsi-ld/v1/entities/<entity-id>`

Original Entity

```
{
    "id": "urn:ngsi-ld:Sensor:001",
    "type": "TemperatureSensor",
    "temperature": {
        "type" : "Property",
        "value" : 25,
        "unitCode": "CEL",
        "observedAt": "2022-01-01"
    }
}
```

Normalized Payload:

```
{
    "temperature": {
        "type" : "Property",
        "value" : 100,
    }
}
```

Result: Merged Entity

```
{
    "id": "urn:ngsi-ld:Sensor:001",
    "type": "TemperatureSensor",
    "temperature": {
        "type" : "Property",
        "value" : 100,
        "unitCode": "CEL",
        "observedAt": "2022-01-01"
    }
}
```

- `value` updated to 100
- `observedAt` **not** removed
- `unitCode` **not** removed
- Other Attributes unchanged

Values from the payload contents **merged** with existing entity. Unchanged data does not need to be supplied

FIWARE

Merge of an **Entity** (2) - **Concise** Payload Support

PATCH `/ngsi-ld/v1/entities/<entity-id>`

Merge means unchanged data no longer needs to be supplied

Normalized Payload

```
{
    "temperature": {
        "type" : "Property",
        "value" : 100,
    }
}
```

Concise Property Payload

```
{
    "temperature": {
        "value" : 100,
    }
}
```

Super Concise Property

```
{
    "temperature" 100
}
```

- `value` updated to 100
- `observedAt` **not** removed
- Other sub-attributes (e.g. `unitCode`) **not** removed
- Other Attributes unchanged

Values from the payload contents **merged** with existing entity.

FIWARE

Merge of an **Entity** (3) - **Key-Values** Payload Support

PATCH `/ngsi-ld/v1/entities/<entity-id>?options=keyValues`

Indicates a lossy payload where only **values** have been supplied

Key-Values Payload (Lossy)

```
{
  "name": "John Ono Lennon",
  "spouse": "http://dbpedia.org/resource/Yoko_Ono"
}
```

Result

- `name` - **Property** type is maintained. `value` updated
- `spouse` - **Relationship** type is maintained. `object` updated
- Other attributes (e.g. `born`) remain unchanged
- All sub-attributes remain unchanged

Values from the payload contents intelligently **merged** with existing entity.

Filters

Use filtering for Queries and Subscriptions

Filtering using the q parameter

- equal - ==
- unequal - !=
- greater - >
- greaterEq - >=
- less - <
- lessEq - <=
- regex pattern - ~=
- not regex Pattern - !~=
- dots (range) - ..
- andOp - ;
- orOp - |

```
?q=((speed>50|rpm>3000);brandName=="Mercedes")

?q=(temperature>=20;temperature<=25)|capacity<=10

?q=(temperature==20..25)|capacity<=10

?q=address[city]!="D%C3%BCsseldorf"

?q=temperature.observedAt>=2017-12-24T12:00:00Z

?q=category=="barn","farm_auxiliary"
```

The geoQ parameters

- `geometry` - any supported GeoJSON type
- `coordinates`
- `georel`
  - `near;maxDistance`
  - `near;minDistance`
  - `within`
  - `contains`
  - `intersects`
  - `equals`
  - `disjoint`
  - `overlaps`

- `geoproperty` - Optional default is `location`

```
?georel=near;maxDistance==2000
   &geometry=Point
   &coordinates=[8,40]
   &geoproperty=observationSpace

?georel=within&
  geometry=Polygon&
  coordinates=[[[100.0,0.0],[101.0,0.0],
    [101.0,1.0],[100.0,1.0],[100.0,0.0]]]&
  geoproperty=location
```

The `temporalQ` parameters

- `timeAt` - any DateTime
- `endTimeAt` - any DateTime
- `timerel`
  - `before`
  - `after`
  - `between`

- `timeproperty` - Optional default is `observedAt`

```
?timerel=before&
  timeAt=2020-04-13T14:20:00Z&
  timeproperty=modifiedAt

?timerel=between&
  timeAt=2021-04-26T09:00:00Z&
  endTimeAt=2021-05-21T14:40:00Z&
  timeproperty=observedAt
```
